DETAILED ACTION

1. This office action is in response to the amendment file 14 September 2006.

Allowable Subject Matter

2. Claims 1-28 are allowed over the prior art of record. The following is an examiner's statement of reasons for allowance:

Referring to claims 1 and 15, Preston discloses a computer method and system for viewing a data dictionary structure, the system comprising a processor comprising: a first component configured to retrieve a data dictionary including terms and term definitions; a second component configured to determine all lexical nodes of the data dictionary based on the terms; a third component configured to parse each term's definition; a fourth component configured to determine dependencies of each lexical node based on the parsed definitions and terms associated with other determined lexical nodes; a fifth component configured to generate a lexical graph based on the determined lexical nodes and the determined dependencies; and a display coupled to the processor and configured to display at least a portion of the generated lexical graph.

Referring to claims 1 and 15, Pentheroudakis discloses a data dictionary including metadata terms and their definitions and that each lexical node of the data dictionary is associated with a metadata term and the term's definition.

Referring to claims 1 and 15, Bagga discloses retrieving a data dictionary including terms and term definitions (pages 3-4, Section 3 - 3.1) and creating a plurality of lexical nodes and determining dependencies of each node (page 5-6, Section 3.5.2).

Referring to claims 1 and 15, Hayes discloses generate a lexical graph based on lexical nodes and their dependencies by constructing a lexical graph that includes word nodes and relations among them (WordNet, para. 4, page 108*, para. 4, page 110; page 112).

None of these references, taken either alone or in obvious combination, disclose all the claimed features of applicant's instant invention, specifically including: creating a plurality of lexical nodes of a data dictionary based on the metadata terms within the data dictionary, wherein each node is associated with a metadata term and the term's definition.

Also, there is no motivation to combine the references to meet these limitations. It is for these reasons that applicant's invention defines over the prior art of record.

Claims 2-14 and 16-28 depend from claims 1 and 15 respectively and are therefore also allowable.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
